Understanding and Maximizing Your High School GPA

SIMPLIFIED SUMMARY DOWN BELOW!

While various factors can cause your Grade Point Average (GPA) to fluctuate, mastering a few key strategies can help you build and maintain a highly competitive academic record. Below is a breakdown of how the GPA system works and the best techniques for maximizing your score.

1. Course Selection: The Foundation of Your GPA

Your course selection is your top priority. High school classes are generally divided into different tiers of rigor. Most schools use a 5.0 point scale with typically 3 tiers of courses in their respective hierarchy.

- **Academic (ACA) / Standard Classes:** These are the foundational courses and have the easiest workload though you can only obtain a maximum of **4.0 points**.if you earn an A(90-100)
- **KAP / Honors Classes:** These intermediate courses require more effort and faster pacing. Because of the increased rigor you can obtain a maximum of **5.0 points** if you earn an A(90-100).
- **Advanced Placement (AP) Classes:** This is the highest tier of coursework in this hierarchy. This is due to the fact that not only do AP classes use a **5.0 point scale**, but they also prepare you for the AP Exams in May. Scoring a 3 or higher (on a 1–5 scale) can earn you college credit and demonstrate to universities that you are capable of college level work..

2. Grades: How the Math Works

A's do not always yield the same GPA points and are determined by what type of courses you take. A display is provided below for better understanding.

Letter Grade	Number Grade	5.0 Scale (Honors/AP)	4.0 Scale (Standard/ACA)

A	90–100	5 Points	4 Points
----------	--------	----------	----------

B	80–89	4 Points	3 Points
----------	-------	----------	----------

Colleges and universities will always analyze your GPA. Implementing these strategies does more than just keep your GPA high (in the 4.5–4.9 range); it acts as proof of your academic dedication. Admissions officers actively look for students who are willing to push beyond the minimum requirements and challenge themselves with rigorous coursework.

MATH BEHIND GPA:

To see how this works in action, let's look at the math. In a typical high school year, you will take 7 classes. To find your GPA, you add up the points from your grades and divide them by the total number of classes.

Let's say you take **four 5.0 classes** (Honors/KAP/AP) and **three 4.0 classes** (ACA). Assuming you earn a perfect **A(90-100)** in all of them:

- 4 Honors classes $\times$ 5 points = **20 points**
- 3 Standard classes $\times$ 4 points = **12 points**
- Total = **32 points**

Now, divide your 32 points by your 7 classes ($32 \div 7$). Your overall average is a **4.57 GPA**.

Even with straight A's, standard classes mathematically pull your average down from a perfect 5.0. You can scale this formula throughout high school simply by adding up the points for every class you've taken and dividing by your total number of classes.

Simplified Wrap-Up

Short on time? Here are the four key takeaways for boosting your GPA:

- **Take the hard classes:** Honors and AP classes operate on a 5.0 scale, meaning an 'A' is worth 5 points instead of 4. Fill your schedule with as many of these as you can comfortably handle.
- **Limit standard classes:** Every standard (4.0 scale) class you take lowers your *weighted* average, even if you get an A. Only take the standard classes strictly required for graduation.
- **Protect your grades:** An 'A' in an AP class is the gold standard, but remember that a 'B' in an AP class is mathematically equal to an 'A' in a standard class.
- **Colleges care about rigor:** A high weighted GPA proves to universities that you aren't just smart, but that you are willing to challenge yourself with college-level workloads.
